

MOVIUS FOR FINANCIAL SERVICES

COMPLIANT MOBILE RECORDING SOLUTION

The Movius Solution provides global financial institutions with secure mobile recording—to deliver a complete BYOD enabled solution in support of compliance.

Movius provides a cloud-based service that enables individuals and financial institutions to achieve regulatory compliance for mobile recording, no matter who owns the device. The solution offers a separate corporate number on employee devices for calling and text with built-in mobile recording – without an additional SIM – while your organization gets 100% control over the number for cost management and regulatory compliance demands.

- This second corporate identity eliminates the need for employees to use their personal numbers for work, so their personal numbers stay private.
- With a separate corporate number, you can accurately manage corporate costs while ensuring the security of information relayed across voice and text.
- The solution is carrier-agnostic and can be deployed at scale with built-in mobile recording without any change to the handset, the SIM or the user's existing mobile network.

MOVIUS FOR FINANCIAL SERVICES

Movius allows you to address legal and compliance requirements associated with the exchange of sensitive corporate information on mobile devices. The solution enables financial institutions to meet stringent compliance requirements related to legislation like MiFID II and the Dodd Frank Act. Firms will need to implement a recording solution that is secure, cost-effective, easy to implement and scale, and that allows call and message recording on individual phone lines when required.

FEATURES OVERVIEW:

END-TO-END SOLUTION

- Provides a single solution for recording, encrypting, storing and retrieving business conversations.

COMPLIANCE

- Enables compliance with Dodd-Frank, MiFID II, FCA COBS 11.8, and others including the requirement to record mobile calls and texts, no matter whether the phone is corporate or privately owned.
- Ability to send all mobile call and SMS recordings to a customer location for storage and retrieval.

BUSINESS-MANAGED MOBILE NUMBER

- Provide a secure business mobile number on a corporate-managed or employees' personal phone.
- Manage business communications on a single device with separate contacts, call and SMS logs, voicemail, scheduling, and more.
- Employees can differentiate between business and personal calls on a single device with distinct Caller ID.

CARRIER-GRADE QUALITY CALLS

- A carrier-grade service that works across all global mobile networks.
- Employees can make and receive calls through cellular voice, mobile data, and/or Wi-Fi.
- Ensures the highest call quality and availability.

DATA ENCRYPTION

- Voice recordings are stored in G.711 WAV format for playback and retrieval.
- SMS recordings are stored in an ASCII format for viewing and retrieval.
- All stored recordings are encrypted using AES 256 encryption.
- Data storage is compliant with Data Protection regulation.

CLOUD BASED APPLICATION

- Does not require change of SIM or handset.
- Deployed as an app over any iOS or Android mobile phone, regardless of underlying carrier.
- Intuitive app experience with no additional user action required for recording.

SECURE

- Works seamlessly with leading enterprise mobility management (EMM) and MDM solutions to protect company data and information.
