

MOVIUS FOR BLACKBERRY®

Movius for BlackBerry® allows employees to leverage the power of BlackBerry®Dynamics to communicate securely on the go, delivering a complete secure mobility platform for global enterprises.

Movius for BlackBerry® is an enterprise-grade application that enables individuals and global enterprises to achieve regulatory compliance for their mobile business communications—no matter who owns the device. The solution offers a separate corporate number on a BYOD or corporate-owned device for calls and SMS with built-in mobile recording, without any change to the handset, the SIM or the user’s existing mobile network. The service is fully integrated with BlackBerry®Dynamics, providing additional security features and policy controls required by global firms today.

Together, Movius and BlackBerry deliver a seamless user experience with easy access to secure business applications while utilizing Movius’ secure voice, SMS, and recording functionality.

- Assigns a separate corporate number to the device for secure voice and text
- Carrier-Grade service that works across all global networks
- Utilizes cellular voice, mobile data, and/or WiFi (not a VoIP-Only service)
- Fully integrated with BlackBerry®Dynamics
- Available for iOS & Android Devices—regardless of carrier

SECURE MOBILE COMMUNICATIONS

- Mobile business number
- Secure voice and SMS
- Voicemail & Scheduler
- Secure business contacts
- Built-in mobile voice and SMS recording
- Voice and SMS archiving integration

ADMINISTRATIVE CONTROL

- Interoperability with other Dynamics apps
- Ability to suppress native phone and SMS from being used to make calls and send texts within Dynamics Container
- Remote wipe of business data only, leaving personal data untouched
- Supports the BlackBerry®Dynamics authentication methods

SEAMLESS INTEGRATED EXPERIENCE

- Follows BlackBerry®Dynamics authentication for single-sign-on experience
- Supports click-to-dial and click-to-text functionality within BlackBerry®Work Email, Calendar and Contacts

FEATURES OVERVIEW:

BUSINESS-MANAGED MOBILE NUMBER

- Provides a secure business mobile number on a BYOD or corporate-owned mobile device.
- Manage business communications on a single device with secure contacts, call and SMS logs, voicemail, scheduling, and more.
- Employees can differentiate between business and personal calls on a single device with distinct Caller ID.

CARRIER-GRADE QUALITY CALLS

- A carrier-grade service that works across all global mobile networks.
- Employees can make and receive calls through cellular voice, mobile data, and/or Wi-Fi (not a VoIP-Only service).
- Ensures the highest call quality and availability.

COMPLIANCE

- Utilizes the BlackBerry®Dynamics Data Loss Prevention (DLP) framework to ensure call logs, contacts and messages are not shared outside the Dynamics container to ensure compliance with PCI 3.0.
- Enables compliance with Dodd-Frank, MiFID II, FCA COBS 11.8, and others including the requirement to record mobile calls and texts, no matter whether the phone is corporate or privately owned.
- Ability to send all mobile call and SMS recordings to a customer location for storage and retrieval.

SEAMLESS AUTHENTICATION & ADMINISTRATION

- Deploy the Movius for BlackBerry® app in the same manner as other Dynamics apps.
- Supports the BlackBerry®Dynamics authentication methods (Dynamics password, Touch ID or Fingerprint authentication).
- Manage access to Movius data using the same processes and policies established for other BlackBerry®Dynamics apps.

MOBILE RECORDING, ARCHIVING, AND RETRIEVAL

- Built-in mobile voice and SMS recording without any change to the handset, the SIM or the user's existing mobile network.
- Captures all incoming and outgoing calls, providing audio recordings and SMS records to help meet regulatory compliance needs.
- Integrates readily with voice and SMS archiving platforms — recording only communications involving the business mobile number within the Movius for BlackBerry® app.

DATA ENCRYPTION

- Voice recordings are stored in G.711 WAV format for playback and retrieval.
- SMS recordings are stored in an ASCII format for viewing and retrieval.
- All stored recordings are encrypted using AES 256 encryption.
- Data storage is compliant with Data Protection regulation.
